

# Live Online Instructor-Led

## Electrical Safety For Qualified Workers

### What You Will Get Out Of This Course

Your employees participating in this class will learn the latest in electrical safety standards and regulations. This training goes toward satisfying your OSHA training requirement and will produce workers more aware of the hazards and how to reduce the risk. This course reflects the evolution of NFPA 70E in the direction of risk assessment and hazard elimination. The hierarchy of risk controls will be discussed in a way that can be applied right away. Shock and Arc Flash hazard PPE selection is covered in detail. Real-world scenarios and OSHA citations will be discussed. OSHA 1910 as well as NFPA 70E will be discussed. We can incorporate your facility's electrical safety program, arc flash incident energy analysis report and equipment labeling, into the class if you'd like. Your people will walk out of this class better prepared for work involving electrical hazards.

### How it works

Upon purchase of this program, an email will be sent to our contact containing the links for accessing the training and details on how it will work.

This course has two components. The live instructor-led element, and the individual online course work, test, and certificate download.

The live instructor-led portion is four hours in length but can vary based on the number of questions. The instructor shares the presentation slides and will deliver the course. The instructor's voice will be heard on your computer audio; no telephones need be involved. Attendees will speak to the instructor using a microphone, your computer's or an external mic connected to your computer. Attendees will be muted but can ask questions by raising their hand and being temporarily unmuted or typing the question into the chat box. The instructor will hear your voice over their computer audio and answer live. Attendees can be logged in as a group with several people watching the same screen in a conference room, or individually at a separate location. This course can be viewed on a mobile device, but the quality may suffer.

The second element, which must be completed to receive a certificate, involves accessing the online section at the same link, completing a few assignments and taking a test. Upon successful completion of all elements of the course, a certificate can be downloaded and printed for that attendee. Each attendee will complete this portion individually and there will be no additional costs for this.

### Live Online Benefits

- Works for one student or a hundred
- Attendees can ask questions & give feedback
- No travel expenses for instructor or attendees
- Attendees can be in multiple locations
- Can drastically reduce the cost of training
- Ensure that multiple locations receive the same training
- All attendees receive certificates
- The course can be broken up
- Scheduling is easier
- Your training budget will stretch further

### Your Instructor For This Training

For the past 28 years, Daryn Lewellyn has been training industrial electrical maintenance workers at facilities from coast-to-coast. He spent ten years working in industry before becoming an instructor. He has developed and taught classes in industrial electricity, hands-on troubleshooting, PLCs, 70E, arc flash, motors and motor controls. He loves teaching.
